

Wheelchair Tilting and Positioning

Full Tilt

1

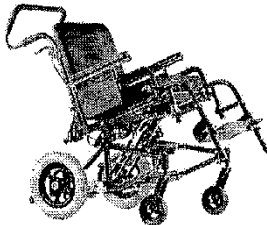

Provide a full tilt back (all the way until it stops) two times per hour. Keep client in this position for approximately 10-20 seconds and then re-position to a semi up-right position.

Half Tilt

2

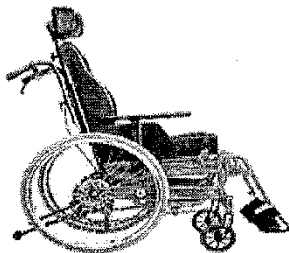

Position client in an upright position for transfers and meals. After the meal, remain in the upright position for 20-30 minutes to allow for digestion, then return to tilt protocol.

Semi-Upright

3

Change tilt position often to alleviate pressure and allow for position change.

Upright Position
